Vocal Link Forms Subsidiary to Sell Unified **Messaging And Telecom Services to Small, Mid-Sized And Soho Businesses**

TEXT:
Vocal Link Inc., a leading
provider of integrated **messaging** and communication services, today
announced
the formation of a wholly owned subsidiary called Transpoint Communications
...

...independent telecommunications agents to sell complete
telecom packages built around Vocal Link's Cross Media **Messaging**(TM),
their
unified **messaging** service.

In addition to the Vocal Link service, the packages will include DSL
service, local...

...sized and small office/home office companies
who are prime targets for our Cross Media **Messaging**(TM) service," said
Paul G.
Black, Vocal Link President and CEO. "By equipping those agents with a
comprehensive package that will enable their customers to meet a wide
variety
of **messaging** and communication needs from one supplier, our Transpoint
subsidiary will enable us to tap into a rich market for Cross Media
Messaging(TM) while allowing our direct sales force to focus on our
products
for larger enterprises and telephone carriers."

Vocal Link's Cross Media **Messaging**(TM) simplifies **message**
management for
business travelers by enabling them to listen and respond to all of their
voicemail, **email**, fax and paging **messages** from a central inbox.
Accessible
from any phone, computer or wireless web-enabled device via...

...the-art speech technology that
converts text to speech and speech to text to streamline **message**
handling.

An **e**-**mail** or a fax can be listened to in its entirety on the
phone; a fax
or an **e**-**mail** can be sent simply by speaking the text into the
phone; a
voicemail can be...

...their voicemail and view their faxes from the Internet or any time they
read
their **e**-**mail**.

Coolemail Changes Name to Vocal Link

PR Newswire

Monday, September 18, 2000 13:24 EDT

JOURNAL CODE: PR LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT

DOCUMENT TYPE: NEWSWIRE

WORD COUNT: 710

TEXT:

CoolEmail.com, a provider of
unique **messaging** and communications services that provide central
access to
information in multiple media formats, announced today...

...as well as to voice-enable mobile
Internet applications.

Vocal Link utilizes a proprietary unified **messaging** technology
called
Cross Media **Messaging** (TM) that enables any **message** to be
transmitted or
received by voice **mail**, **email**, fax or pager with the help of
seamless
text-to-speech and speech-to-text conversion. An **email** or a fax can be
listened to in its entirety on the phone; a fax or an **email** can be sent
simply
by speaking the text into the phone; a voicemail can be forwarded as a fax;
and so on. Users can receive, reply, forward and send new **messages** by
their
choice of medium.

This next-generation **messaging** technology dramatically simplifies the
process of managing business communications. In addition to being able to
retrieve and respond to **messages** in any media by telephone simply by
calling
into a personal toll-free number, customers can listen to their voice
mail and
view their faxes any time they read their **email** or surf the Internet.
Email
and Internet content can also be accessed through cell phones and other
wireless devices with...

...push-button commands. These
capabilities are unique in the industry.

Vocal Link's Cross Media **Messaging** (TM) service also synchronizes a

given
user's **e**-*mail** accounts for easy management; provides to-do list,
contact
manager and calendar features; automatically converts **messages** sent to
a
distribution group to each recipient's preferred format; and offers a
secure
messaging option for sensitive communications.

In addition to its core **messaging** service, Vocal Link offers
outsourced
CASP services that enable enterprises to apply Vocal Link's Cross Media
Messaging (TM) technology to their specific **messaging** and
communication needs.
Utilizing its Global Services Platform, Vocal Link can integrate its
technology with...

...risks, long development times,
infrastructure investments and in-house resources.

"With the rapid proliferation of **email**, e-commerce, mobile phones,
PDAs
and pagers, there is an urgent need in the marketplace...

...Paul G. Black, President and CEO of Vocal Link, Inc.

"Our original speech-activated unified **messaging** service was an
important
first step because it made it possible to retrieve and send voice **mail**,
email,
faxes and pages simply by using the phone," Black said. "Our new products
and
wireless...

...marketplace that is expected to explode during the next few years."

The market for unified **messaging** is also poised for substantial
growth. A
report issued last month by Forrester Research predicts that strong demand
by
message-overloaded mobile professionals, SOHO customers and young
consumers
will spur new offerings by telephone carriers, major online portals and
companies requiring more efficient **messaging** solutions for mobile
employees.

"Our ability to serve the communication needs of both the mobile...

...a comprehensive range of
services to help ease the burden of managing today's multiple **messaging**
and
information platforms."

Vocal Link has corporate offices in Calabasas, Calif., with technology
headquarters in...

...founded in
1997.

US 6370586	B2		G06F-015/173	

Abstract (Basic): US 20010056483 A1

NOVELTY - A management controller connected to an interface, monitors the system components and sends a **message** to the remote devices (510,512,514), in response to the components operating outside a predetermined range. The controller acquires a network ID for the electronic system and maintains a transmission control protocol/Internet protocol (TCP/IP) stack to communicate with the remote devices.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Electronic device monitoring method;
- (b) Machine-readable medium storing instructions for monitoring the electronic device

USE - For monitoring electronic system including electronic devices with system management controller based on 80386 processor core from Intel or 68030 processor core from Motorola such as personal computer, mainframe computer, server, network computing device, handheld computer, network components such as routers, hubs, through networks such as LAN, Internet, wireless network, telephone network.

ADVANTAGE - Since the TCP/IP protocol is maintained for communication with the remote devices, the controller identifies malfunction and failure of the devices accurately and the communication is efficient.

DESCRIPTION OF DRAWING(S) - The figure shows the network of electronic devices.

US 5420858	A		24	H04J-003/26	
JP 7074782	A		24	H04L-012/64	

Abstract (Basic): US 5420858 A

The network has an ATM network for switching ATM cells between ATM switches and devices coupled with them. A non-ATM communication media allows communication of non-ATM ****messages****. A concentrator coupled between the networks allows disassembly of non-ATM ****messages**** and their transmission on the ATM network. The concentrator also has a segmentation circuit coupled to the non-ATM communication media for segmenting each non-ATM ****message**** into at least one ATM cell for transmission on that network.

A reassembly circuit receives ATM cells from the ATM network and reassembles non-ATM ****messages**** from them. The reassembly circuit has a reassembly RAM for storing data for reassembly into non-ATM ****messages**** and control circuitry for controlling addressing of the reassembly RAM based, at least partly, on VCI address information provided in the received ATM cells.

USE/ADVANTAGE - Interconnection of file servers. Require minimal displacement of existing network components.

Abstract (Basic): WO 8807293 A

The **messages** are transmitted from a source to a destination in fixed length slots. A segmentation machine divides the **message** into fixed length slots which include a header field and a **message** segment (40). The machine includes a coding device for providing a source identifier field in the header of each slot. The source identifier field includes a source identifier code which is uniquely associated with the **message** to be transmitted. A reassembly machine is located at the destination. It includes a control for reassembly of slots in accordance with the source identifier codes of the slots.

USE/ADVANTAGE - Transfer of **messages** in time multiplexed slotted environment with constrained destination resources. Efficient support of any type of addressing, minimal communication overheads, utilisation of destination resources is maximised.

Dwg.1/12

Abstract (Equivalent): EP 308449 B

A method of transmitting variable length **messages** (20) on a network having a plurality of nodes (4) from a source node (42) having a source address (SA) to a destination node (46) having a destination address (DA) said method including the steps of: segmenting each variable length **message** (20) into a plurality of fixed length slots (32) including a first slot, continuing slots, and a last slot, each of said fixed length slots including a header field (34,36,38) and a **message** segment (40), transmitting the fixed length slots from the source node to the network; and controlling reassembly of fixed length slots from the source node to the network; and controlling reassembly of fixed length slots received at the destination node (46) into the variable length **message** on the basis of information in the header field; characterised by: a source identifier code (SI) uniquely associated with the variable length **message** to be transmitted from the source node being provided in a source identifier field (38) in the header field of each of said fixed length slots (32); the destination address (DA) being entered only in the **message** segment (40) of the first fixed length slot; and said reassembly of fixed length slots at the destination node being controlled in accordance with the source identifier code (SI) of fixed length slots (32) received at the destination node (46).

Dwg.1/12

Abstract (Equivalent): US 5050166 A

The method of transmitting variable length **messages** on a network from a source having a source address to a destination having a destination address, involves segmenting each **message** into a number of fixed length slots including a first slot, continuing slots, and a last slot each of the slots include a header field which includes a source identifier field, which is shorter than the destination address, and a **message** segment. A source identifier code is provided in the source identifier field. Each source identifier code is uniquely associated with the **message** to be transmitted. The destination address is entered in the **message** segment of the first slot. The slots are transmitted on the network.

Reassembly of slots is controlled at the destination in accordance with the source identifier code of slots received at the destination. The type field is provided in the header field of each slot, three codes representing a beginning of **message** continuation of **message** and an end of **message** respectively are coded into the

type field. The reassembly of received slots are controlled at the destination in accordance with the codes.

ADVANTAGE - Communications overheads reduced and utilisation of destination resources is maximised. (19pp

English Abstract

A method is disclosed for prevention and/or treatment of diseases in which 5- and 12-lipoxygenase activity contributes to the pathological condition, by administration of 12-methyltetradecanoic acids alone and in conjunction with other therapeutic compounds. Methods to inhibit lipoxygenase mediated cancers and inflammations are disclosed.

French Abstract

L'invention concerne une methode de prevention et/ou de traitement de maladies dans lesquelles l'activite de la 5-lipoxygenase et de la 12-lipoxygenase contribue au developpement de la maladie. Cette methode consiste a administrer des acides 12-methyltetradecanoiques seuls ou combines a d'autres composes therapeutiques. L'invention concerne egalement des methodes d'inhibition de cancers et d'inflammations induits par la lipoxygenase.

Examination 20020321 Request for preliminary examination prior to end of 19th month from priority date

Claim

1 A method for treating cancer in a subject sensitive to an inhibitor of lipoxygenases, which comprises, administering an amount of 12-methyltetradecanoic acid in an effective carrier effective to treat the cancer.

2 The method of claim 1, wherein the cancer is prostate cancer. 3 . The method of claim 1, wherein the cancer is lung cancer. I 0 4. The method of claim 1, wherein the cancer is selected from the group consisting of pancreatic cancer, colon cancer, and breast cancer.

5 The method of claim 1, wherein the administration is affected by a means selected from the group consisting of oral, rectal, topical, aerosol, intravenous, subcutaneous, intramuscular, intrabronchial, and intraperitoneal administration.

6 The method of claim 1, wherein the amount is between about 1 ng/kg body weight and about 300 mg/kg body weight, per day.

7 A method for preventing the onset of cancer in a subject at risk of developing cancer, comprising administering to the subject an amount of 12-methyltetradecanoic acid, effective to prevent the cancer.

8 The method to inhibit inflammation in a mammal comprising the administration of 12-methyltetradecanoic acid in an effective carrier.

9 The method of claim 8, wherein the inflammation is selected from the group consisting of arthritis, Crohn's Disease, irritable bowel syndrome, atopic dermatitis, psoriasis, asthma, multiple sclerosis, ankylosing spondylitis, Scleroderma and psoriasis.

10 The method of claim 8, wherein the administration is affected by a means selected from the group consisting of oral, rectal, topical, aerosol, intravenous, subcutaneous, intramuscular, intrabronchial, and intraperitoneal administration.

18

. The method of claim 8, wherein the amount is between about 1 ng/kg body weight and about 100mg/kg body weight.

12 A method to inhibit inflammation associated with arteriosclerosis in an animal comprising administration of an effective amount of 12-methyltetradecanoic acid.

13 A method of Claim 12, wherein an effective amount is between 1mg/kg body weight to 300mg/kg body weight.

14 A method of any of claims 1-6 which further comprises co-administration of at least one other anti-cancer compound.

15 A composition of matter comprised of at least 60% 12-MTA, no more than about 10% eicosapentaenoic acid (EPA, 20:5) and no more than about 10% palmitoleic acid (16:1) derived from sea cucumber lipids.

16 A composition of claim 15, wherein the composition is obtained by selective removal of sterols, sterol esters, phospholipids, pigments, glycolipids through extraction by supercritical CO₂ and polar co-solvents and preparative HPLC.

19

AMENDED CLAIMS

[received by the International Bureau on 15 August 2001 (15 01); original claims 1-10 and 14 cancelled; new claims 17-22 added; remaining claims unchanged (1 page)]

17 A method for treatment of a disease in which 5- and 12- lipoygenase activity contributes to the pathological condition, comprising administering an amount of 12-methyltetradecanoic acid in a suitable carrier effective to inhibit lipoxygenase activity.

18 The method of claim 17, wherein the disease is an inflammatory disease.

19 The method of claim 18, wherein the inflammatory disease is selected from the group consisting of arthritis, Crohn's Disease, irritable bowel syndrome, atopic dermatitis, psoriasis, asthma, multiple sclerosis, ankylosing spondylitis, Scleroderma, and

20 The method of claim 17, wherein the administration is affected by a means selected from the group consisting of oral, rectal, topical, aerosol, intravenous, subcutaneous, intramuscular, intrabronchial, and

intraperitoneal administration.

21 The method of claim 17, wherein the amount is between about 1 ng/(g body weight and about 300 mg/kg body weight, per day.

22 The method of claim 21, wherein the amount is between about 1 ng/kg i.-body weight and about 100 mg/kg body weight, per day.

AMENDED SHEET (ARTICLE 19)
